Structural analysis of a chimeric bacterial alpha-amylase.
High-resolution analysis of native and ligand complexes.";
Biochemistry 39:9099-9107(2000)
-1- CAPALYFIC ACTIVITY: Endobydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.
-1- COPACTOR: Binds 3 calcium ions and 1 sodium ion per subunit.
-1- SUBURIT: Monomer.
-1- SUBURIT: Monomer.
-1- SUBURIT: Belongs to family 13 of glycosyl hydrolases.
Signal; 3

"Nucleotide sequence of the maltohexaose-producing amylase gene
an alkalophilic Bacillus sp. #707 and structural similarity to
liquefying type alpha-amylases ",

Biochem. Biophys. Res. Commun. 151:25-31(1988).

-!- CAPALYTIC ACTIVITY: Hydrolysis of 1,4-alpha-D-glucosidic lin
in amylaceous polysaccharides so as to remove successive
maltohexaose residues from the non-reducing chain ends.

-!- COPACTOR: Binds 2 calcium ions and 1 sodium ion per subunit
                                                                                                                                                                                                                                                                                                                                                                               Glucan 1,4-alpha-maltohexaosidase precursor (EC 3.2.1.98)
(Maltohexaose-producing amylase) (Exo-maltohexaohydrolase)
Bacillus sp. (strain 707)

CORACTOR: Binds 3 calcium ions per subunit (By similarity).
SUBUNIT: Monomer.
TISSUE SPECIFICITY: Most abundant in embryo-derived callus tissue.
DEVELOPMENTAL STAGE: Expressed at a high level during germination
in the aleurones cells under the control of the plant hormone
gibberellic acid and in the developing grains at a low level.
SIMILARITY: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      germination.

CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: Important for breakdown of endosperm starch during

                                                                                                                                                                                                                                                                                   SUBUNIT: Monomer.

TISSUE SPECIFICITY: Germinating seeds.

TISSUE SPECIFICITY: Germinating seeds.

DEVELOPMENTAL STAGE: Expressed at a high level during germination in the aleurones cells under the control of the plant hormone gibberellic acid and in the developing grains at a low level.

SIMILARITY: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                393

-[- CATALYTIC ACTIVITY: Degrades starch to cyclodextrins by formation of a 1,4-alpha-D-glucosidic bond.
-[- COFACTOR: Binds 2 calcium ions per subunit (By similarity).
-[- SUBCELLULAR LOCATION: Secreted.
-[- SIMILARITY: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EMBL; M33302; AAA22239.1; --

                                                                                                                                        CATALYTIC ACTIVITY: Degrades starch to cyclodextrins by formation of a 1,4-alpha-D-glucosidic bond.

COFACTOR: Binds 2 calcium ions per subunit.

SUBUNIT: Monomer.

MISCELLANEOUS: CGTASE MAY CONSIST OF TWO PROTEIN DOMAINS: THE ONE IN THE ANINO-TERMINAL SIDE CLEAVES THE ALPHA-1,4-GLUCOSIDIC BOND IN STARCH, AND THE OTHER IN THE C-TERMINAL SIDE CATALYZES OTHER ACTIVITIES, INCLUDING THE RECONSTITUTION OF AN ACTIVITIES, INCLUDING THE RECONSTITUTION OF AN ALPHA-1,4-GLUCOSIDIC LINKAGE FOR CYCLIZING THE MALIFOLIGOSACCHARIDE PRODUCED.

SIMILARITY: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             405
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 382

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides. COPACTOR: Binds 3 calcium ions per subunit (By similarity). SUBUNIT: Monomer (By similarity).

SUBUNIT: Monomer (By similarity).

BYVELOPMENTAL STAGE: Expressed at a high level during germi in the aleurones cells under the control of the plant hormoglibberellic acid and in the developing grains at a low level similarity: Belongs to family 13 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              germination

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COFACTOR: Binds 2 calcium ions per subunit.

SUBUNIT: Monomer.

MISCELLANEOUS: CGTASE MAY CONSIST OF TWO PROTEIN DOMAINS: THE ONE
IN THE AMINO-TERMINAL SIDE CLEAVES THE ALPHA-1,4-GLUCOSIDIC BOND
IN STARCH, AND THE OTHER IN THE C-TERMINAL SIDE CATALYZES OTHER
ACTIVITIES, INCLUDING THE RECONSTITUTION OF AN
ALPHA-1,4-GLUCOSIDIC LINKAGE FOR CYCLIZING THE
MALTOOLIGOSACCHARIDE PRODUCED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: Belongs to family 13 of glycosyl hydrolases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-JAN-94.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Alpha-amylase (EC 3.2.1.1) precursor - Bacillus sp.
alpha-amylase (EC 3.2.1.1) precursor - Bacillus sp.
N;Alternate names: 1,4-alpha-D-glucan glucanohydrolase; G6-amylase
C;Species: Bacillus sp.
C;Date: 31-Mar-1989 #sequence_revision 18-Aug-1995 #text_change 18-Jun-1999
C;Accession: A27705
R;Tsukamoto, A.; Kimura, K.; Ishii, Y.; Takano, T.; Yamane, K.
Biochem. Biophys. Res. Commun. 151, 25-31, 1988
A;Title: Nucleotide sequence of the maltohexaose-producing amylase gene from an A;Reference number: A27705; MUID:88162814; PMID:3258152
A;Accession: A27705
A;Accession: A27705
A;Roccule type: DNA
A;Residues: 1-518 <TSU>
A;Cross-references: GB:M18862; NID:g142496; PIDN:AAA22231.1; PID:g142497
A;Experimental source: chromosomal DNA of strain 707
A;Note: amino end of mature protein also determined
C;Comment: This is the smallest of five starch-hydrolyzing enzymes from this org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

A; Experimental source: chromosomal DNA of strain DN1792
C; Comment: Alpha-amylase genes have been found on plasmids and in multiple copies on to cycloment: Alpha-amylase genes have been found on plasmids and in multiple copies on to cycloment: Alpha-amylase genes have been found on plasmids and in multiple copies on to cycloment: Alpha-amylase of internal 1,4-alpha-D-glucosidic bonds
A; Start codon: GTG
C; Function:
A; Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A; Pathway: glycogen/starch degradation
A; Pathway: glycogen/starch degradation
C; Stepvords: extracellular protein; glycosidase; heat-stable protein; hydrolase; polyse
C; Keywords: extracellular protein; glycosidase; heat-stable protein; hydrolase; polyse
F; 134/Domain: signal sequence #status predicted <MAT>
F; 139,237,272/Binding site: calcium (Asp, Asp, His) #status predicted
F; 268,299,365/Active site: Asp, Glu, Asp #status predicted
